

Combined penthouse louvre (June 2025)

**New design
Combi penthouse louvre
Separate supply and return hood possible**

Our new range of penthouse louvre are available from June 2025!

This new line will initially be carried alongside our current product line of penthouse louvre. With the new 'design' line, we took a good look at the functionality and operation of the louvre.

The new line is expected to be available from the beginning of 2025. Keep an eye on our website for the technical documentation and prices or stay informed via our newsletter.

The most important features:

- Vertical return is done at speed of 5 m/s to 10 m/s to keep the polluted air as far as possible away from the supply.
- Due to the increased supply device, the physical distance between supply and return is increased, reducing short circuits to a minimum.
- The fresh air is sucked in on 4 sides of the combi penthouse louvre.
- Drainage of the roof and return collection takes place "by" the corner posts, which prevent rainwater from flowing over the return diffusers.
- Patented rain protection in the return duct.
- To be installed on in-situ roof base and optional versions.
- The Louvres are made entirely of aluminium and are also provided with a polyester powder coating.
